

10 Reasons You Should Specify Armeria's Polymer Resin Products

1. **CLEAN MANUFACTURING PROCESS:** Armeria's products are rotationally molded using heat, air, and recycled water. Therefore, it is a very clean manufacturing process. This continual biaxial rotation of the mold during the fusion process internally strengthens even the deepest corners and crevices of every part and the color is molded all the way through so it will never chip, crack or rust.
2. **RECYCLED MATERIAL CONTENT:** Polymer resin streetscape and site furnishing products can be made with up to 100% recycled material content. With our products... recycled material percentages increase with the darkness of color. Black planters can be manufactured from 100% recycled material. Terracotta colored planters can contain up to 20% recycled material. Products manufactured with polymer resin "type 2" can be 100% recycled after usage.
4. **BUILT TO LAST:** Our Polymer Resin containers carry a 10 year warranty which is approximately 9 years longer than competitors with fiberglass or metal containers. This same polymer resin material is utilized as the outside body encasement of all our lighting products. This is why they are extremely durable, will not chip or crack and never rust.
5. **EXTREME WEATHER CONDITIONS:** Our polysteel light poles have withstood torrential weather conditions including hurricanes and tornados. All of the products have molded in UV inhibitors allowing them to withstand very extreme weather conditions for years and years.
6. **REDUCED FREIGHT EXPENSE:** These products are durable yet light weight. Therefore, they can nest and stack for reduced freight expense.
7. **EASY INSTALLATIONS:** There are tremendous savings on installation. You can pick them up and move them around. Once in the proper location and installed or filled with plant material they are not going anywhere.
8. **MANUFACTURED IN AMERICA.** Our founder has been an American manufacturer for 30 years. All of Armeria's products are manufactured in America; California, Ohio, South Carolina, Tennessee with the exception of a few containers.
9. **EASY GRAFFITI REMOVAL:** Products clean up easily with soap and water, or in extreme cases with a power washer. Graffiti can even be removed with a paint remover and not damage the container.
10. **CUSTOM GRAPHICS:** Custom designed high quality graphics can be molded in to or onto our products.

CUSTOM PROJECTS? Lastly, Armeria is built on the philosophy of never say "no". We have teamed up with every United State's manufacturer that rotationally molds polymer resin products utilized by landscape architects because we believe in the long term benefits your clients will experience with these products. If you need a specific design or style we will find it for you or... give us the opportunity to create it. Many of our designs were created for specific projects.
